## Global Telementoring

---

Box Line Box (BLB) has been supporting telementoring in the global arena for many years. We are dedicated to enhancing the world of medical education with technology.

Over the years BLB has supported clinical telecommunications for surgical teams in Haiti and other remote locations such as the first ever live surgery transmission from a forward operating hospital in Afghanistan.

For BLB, the goal of global telementoring is to assist the education of surgeons and surgical residents in under-resourced locations while providing the same quality and interactivity as top institutions or educational events.

Mike Evans, Founder and Owner of BLB states that "traveling to these areas, you see how much the student doctors want to learn and how much this education can improve quality of care for the patient. In under-resourced regions for instance, telementoring can bring education in laparoscopic surgery that not only advances the capabilities for the local hospital, it also helps the patient and their family avoid long costly stays".

BLB has become expert at applying emerging technologies to meet the many challenges of global telementoring.

If you are interested in supporting global telementoring or for more information on our live surgery production services visit us at [boxlinebox.com](http://boxlinebox.com) or contact us at [info@boxlinebox.com](mailto:info@boxlinebox.com).
